DANGEROUS JUNCTION

CASE STUDY ALIS SHIELD

PROJECT GOAL

The goal was to eliminate the near misses of forklifts on blind junctions.

THE SOLUTION - ALIS SHIELD

Aproximately 15 forklifts are equipped with the vehical tag that wirelessly communicates with the control unit placed on the wall in the junction. When a forklift moves forward to a junction, on the other blind corner starts to blink the safety sign „STOP” as alert for other forklift.

The project is planned to further expand with other components of the anti-collision system.

elimination of
operational blindness

active alert
of forklift driver
