SAFETY ZONE AROUND SUSPENDED LOAD

CASE STUDY ALIS VISUALIZATION

PROJECT GOAL

The project goal was to improve the safety nearby the suspended load of maximum size **5 x 2,5 m** by innovative technology that eliminates operational blindness.

THE SOLUTION - LED VISUALIZATION

ALIS visualization is the solution that meets the expectations of **Hyundai Motors Manufacturing and Czech** and **Continental Barum s.r.o.** and the project goal without any doubts.

Two LED projectors are installed on the crane and **illuminate the safety zone around the suspended load**. The projectors are triggered by the crane's motion and call attention to pedestrians to danger in operation.

LED projection offers the solution to legislative regulation describing the safety of work around the suspended load. Moreover, the multi-colored symbol revives the working space and positively influences the employee's psyche.

REFERENCE

„We started to cooperate with ALIS Tech s.r.o. intending to improve safety in our operation. Thanks to their smart solutions - specifically built-in LED projectors in a parabolic mirror and safety LED marking for cranes we managed to eliminate operational blindness and increase the clarity of crossroads and space near suspended loads.“
